PrEP Update (including injectable PrEP)

GPs and NPs can prescribe PrEP to help reduce HIV transmission in Australia – including an injectable mode of delivery

Date, Time and Venue:

Date: Thursday, 30 May 2024

Time: 7:00PM – 8:00PM (AEST)

Venue: Webinar, via Teams

Pre-Exposure Prophylaxis, more commonly known as PrEP, prevents HIV infection if and when someone is exposed to the virus. As of June 2022, almost 60,000 people have accessed PrEP at least once and worldwide data shows falling rates of new HIV infections where PrEP coverage is good in high-risk populations.

This webinar will be targeting ACT and NSW General practitioners and Nurse Practitioners interested in PrEP and Long Acting (LA) injection to review PrEP and the dosing schedule for oral and injectable PrEP.

Learning Objectives

- Explain different options for PrEP Dosing
- Identify the prescribing pathways of PrEP within your local jurisdiction
- Implement the PrEP Decision Making tool to manage patients on PrEP
