viral hepatitis & sexual health workforce

NSW Hepatitis B in Primary Care

Date: Wednesday, 4 December 2024

Time: 6:30pm – 8:00pm (AEDT)

Venue: Online, via Zoom.

Target audience: General Practitioners, primary care Nurses, and other interested primary care providers working with patients at risk of or living with hepatitis B based in NSW.

In 2022, an estimated 205, 549 people were living with chronic hepatitis B (CHB) in Australia, with 27.9% undiagnosed and 74.5% were not engaged in regular care (Viral Hepatitis Mapping Project: Hepatitis B, National Report 2022).

Guideline-based management and treatment of CHB can prevent liver cancer, with CHB being the primary cause of liver cancer worldwide. Primary care practitioners play a critical role in the diagnosis and management of CHB in the community, and in reducing preventable deaths from liver cancer.

Presented by **Dr Nada Andric**, a General Practitioner at The Haymarket Foundation, Chippendale, this webinar will provide participants with crucial knowledge and understanding of hepatitis B. Topics covered include epidemiology, transmission, testing, monitoring, and management.

Learning outcomes:

- Identify priority populations for hepatitis B testing in Australia.
- Interpret hepatitis B serology results.
- Describe the role of primary care in the testing, diagnosis and management of patients with hepatitis B in the community.
